Mar. 31

Pigeon Point, San Mateo Co., Calif.

Area: watched ocean from car in wind-rain storm. 4 freighters (north) were seen close enough to check for walbatrosses in wake. Three of the freighters had 1-3 trailing Black-footed Albatrosses. Weather conditions certainly inhibited bird movement, observer efficiency.

Time: 0815-1050, 1315-1400 Observer: Linda Hale, Steve Cardiff, Cheryl St.

Sky: overcast (horizon visible in 50% of time); rain light to moderate.

Wind: 10-20 S Temp: 55

<u>Species</u> : Common Loon	3	Brandt's Cormorant	300 → N
Arctic Loon	400	Pelagic Cormorant	50 → N
Red-throated Loon	2

## Paso Picacho, Cuyamaca Mtns, San Diego Co., Calif

Area: walk around outskirts of campground Time: ~1 hr.

Obs: same

Wind: 5-10 Sky: p.c.

Species: Red-tailed Hawk	1	Andubon's Warbler	5
Band-tailed Pigeon	5	Townsend's Warbler	2
Acorn Woodpecker	5	Hermit Warbler	1
Nuttall's Woodpecker	4	Black-headed Grosbeak	1
Ash-throated Flycatcher	1	Purple Finch	2
White-headed Woodpecker	1	Rufous-sided Towhee	1
Olive-sided Flycatcher	1	Oregon Junco	2
Steller's Jay	10		
Mountain Chickadee	3		
Plain Titmouse	2		
White-breasted Nuthatch	2		
Pygmy Nuthatch	3		
Brown Creeper	1		

Comments: Although time of day and weather conditions were nearly identical to those of 25 Apr., bird numbers were much reduced, almost certainly due to abundance of campers using the campground + elsewhere Hwy 79. Turkey Vulture 1, Cooper's Hawk 1, Red-shouldered Hawk 1 (15 mins)

- + Santee Lakes, San Diego Co.: Cassin's Kingbird, Black Phoebe, Tricolored Blackbird (1 hr.)
- + Mission Dam: White-tailed Kite 1, Canyon Wren 1, Yellow-breasted Chat 2, Bell's Vireo 2, Rufous-crowned Sparrow 2, Am. Goldfinch 2, Grasshopper Sparrow, Brown Towhee 2

## Point Loma, San Diego Co., Calif

+ brief stops at Loma College, Cabrillo Nat. Mon.

Area: coast from Coast Guard Lighthouse to nearly parking lot next to marine lab Time: 1610-1645 Tide: High

Species: Arctic Loon	10	Parasitic Jaeger	2
Red-throated Loon	1	Western Gull	15
Brown Pelican	6	Heermann's Gull	1
Black Storm-Petrel	100	Elegant Tern	1
Brandt's Cormorant	10	tern (sp)	50
Pelagic Cormorant	2	White-throated Swift	1
Surf Scoter	25	Barn Swallow	10
Black Oystercatcher	1	Com. Raven	1
Black-bellied Plover	1	Red-breasted Nuthatch	1
Ruddy Turnstone	2	Wren Tit	2
Spotted Sandpiper	1	Hermit Thrush	1
Wandering Tattler	2	Ruby-crowned Kinglet	1
		Cedar Waxwing	50
		Townsend's Warbler	1
		Wilson's Warbler	2
		Hammond's Flycatcher	1
		West. Flycatcher	1

+ San Diego River mouth: Royal Tern 25, Least Tern 25, Com. Tern 50, Caspian Tern 10

## La Jolla, San Diego Co., Calif.

Area: scanned ocean + rocks from Pt. La Jolla. Time: 1630-1700

Tide: high Wind: 0-5 Sky: sunny, p.c. Observes: same

Species: Sooty Shearwater	1	tern (sp)	200
Manx Shearwater	3	Western Gull	23
Brandt's Cormorant	2	Heermann's Gull	8
Black Turnstone	1		
Pomarine Jaeger	10		
Parasitic Jaeger	20+

June 3

### Monterey area, Monterey Co., Calif

Area: Carmel River mouth - strictly from Carmel River beach -  
and look virtually only at the white-rumped Sandpiper found yesterday  
by Jeri Langham. Time: 0600-0730 Observers: Linda Hale, Garth Alton,  
Chris Carpenter, Jeri Langham, Ron Branson, + many members of  
Sacramento Aud. Society. Wind: 0 Sky: thick high overcast Temp: 60  
Water: fairly large exposed mudflat.

<u>Species:</u> Mallard	10	Swainson's Thrush	1
Red-breasted Merganser	1	Eur. Starling	10
Killdeer	2	Com. Yellowthroat	4
<u>White-rumped Sandpiper</u>	1	House Sparrow	5
Wilson's Phalarope	1 ♀	Red-winged Blackbird	15
Western Gull	10	Brewer's Blackbird	10
Mourning Dove	2	Brown-headed Cowbird	2
Belted Kingfisher	1	House Finch	10
Black Phoebe	1	White-crowned Sparrow	2
Violet-green Swallow	5		
Tree Swallow	2		
Barn Swallow	15		
Cliff Swallow	20		
Rough-winged Swallow	2		
Scrub Jay	2		
Long-billed Marsh Wren	1		

Area 2: Cypress groves at Crespi Pond and Esplanade - no  
migrants seen despite dead calm and thick, high overcast

June 18

### Palace of Fine Arts, San Francisco, San Francisco Co., Calif

Area: walked all the way around the lake, but concentrated on the  
island at N. end, looking for Great-tailed Grackle reported here earlier  
Time: 1900-1945 Wind: S-15 W Sky: clear Temp: 60  
Observers: Linda Hale, Don Roberson, Laurie Binford, Joe Morlan, Jolaine Munch, Bud Fry

Remsen,  
J.V.  
1978

## Journal

### Avery Island, Iberia Par.

Nov. 25

Area: walked over much of the "Jungle Gardens" and spent 45 minutes at the Bird Island lookout tower Time: 1345-1630 Observer: Linda Hale

Wind: 0 Temp: 70 Sky: overcast

[cont]

<u>Species</u> : Little Blue Heron	15	Common Crow	30
Snowy Egret	30	Fish Crow	100
Cattle Egret	1	House Wren	2
Louisiana Heron	2	Brown Thrasher	2
Blue-winged Teal	50	Ruby-crowned Kinglet	2
Turkey Vulture	15	Blue-gray Gnatcatcher	1
Black Vulture	2	Myrtle Warbler	5
Red-shouldered Hawk	1	Orange-crowned Warbler	3
Com. Gallinule	50	Wilson's Warbler	1
Am. Coot	15	Boat-tailed Grackle	5
Killdeer	2	White-throated Sparrow	2
Yellow-shafted Flicker	1	Red-bellied Woodpecker	1
Yellow-bellied Sapsucker	3	Cardinal	2
Eastern Phoebe	1	Belted Kingfisher	1
Blue Jay	2	Cedar Waxwing	2

Comments: The Jungle Garden area looks good for wintering vagrants - huge live oaks and dense thickets, numerous ponds, exotic plants - but birds were strikingly scarce.

### Nov. 26 Denham Springs, Livingston Par

Area: walked down an overgrown old road NE of Denham Spgs in a mixed woods - meadow - thicket situation Time: 0950-1145

Observer: Linda Hale Wind: 10-15 S Sky: p.c. Temp: 65-70

<u>Species</u> : Killdeer	1 (over)	Com. Yellowthroat	2
Yellow-shafted Flicker	1	Rufous-sided Towhee	1
Com. Crow	5	White-throated Sparrow	5
Carolina Chickadee	2	Swamp Sparrow	1
Winter Wren	1		
House Wren	3		
N. Mockingbird	1		
Am. Robin	1		
Myrtle Warbler	2		

### Dec. 14 4815 Kendall, New Orleans, Louisiana (Robert Raether home):

Buff-bellied Hummingbird 2  
Black-chinned Hummingbird 2 (1 im. ♂, 1 ♀)  
Rufous Hummingbird 1 ♂ (ident. assumed)

45th St. New Orleans (Nancy Newfield home):

Broad-tailed Hummingbird 1 im. ♂  
Black-chinned Hummingbird 2  
Rufous Hummingbird 2 im. ♂

### Dec. 16 Cameron Area, Cameron Parish, Louisiana (Sabine CBC)

Area: East Jetty (walked out to within 200 yds of tip 0700-1000); East Jetty Beach & East Jetty Rd (1000-1200); Mrs. Kossyn's house in Cameron (1300-1400); Broussard Beach area (1400-1530); East Jetty Woods (1530-1645); East Jetty (1700-1745). Observer: Linda Hale; PM - Ron Stein, Melvin Weber. Temp: 60-75 Wind: 0-5 Sky: low overcast, fog, intermittent rain until noon; clear in afternoon Tide: Low at 0900

Remsen,

Yellow-billed Loon  
Gavia adamsii

Feb. 12 Monterey Bay boat trip, Monterey Co. Calif.: 1 seen within 1 mile of shore between Hopkins Marine Station and Lover's Point. I was going over loon identification with a beginner when the bird appeared conveniently next to a Common Loon just studied. It was the basic size and shape of a Common Loon but seemed larger, longer-billed, and thicker-necked. The bill was distinctly yellow, not pale grayish as in pale-billed Commons; the distal  $\frac{1}{4}$  of the upper mandible seemed particularly yellow; the culmen was clearly seen to be pale for at least the distal  $\frac{1}{2}$  (S.F. Bailey from the bridge was able to see that it was pale for its entire length); the rest of the bill was dull yellowish except for some dusky on the sides of the basal  $\frac{1}{3}$  of the upper mandible; the upper mandible was very straight except for a slight droop at the tip; there was a noticeable gap between the two mandibles when viewed from the side. The rest of the plumage did not appear to differ noticeably from Common Loon (perhaps closer study without pouring rain and wind would have yielded further differences), except that there was a dark smudge in the auricular area which contrasted with a paler brown facial area. The bill was also held at a slightly upward angle. When flushed, the bird seemed very ponderous - very slow, labored wingbeats and large body. It dove and came up hundreds of yards from the original spot, repeated this 2-3 times, and finally eluded us completely; it was able to stay underwater for very long intervals.

The bird was studied from as close as 40 yards (but more often 50-100 yds) for at least 3-4 minutes

Remsen,  
J.V.  
1978

Yellow-billed Loon  
Gavia adamsii

Monterey Bay boat trip [cont]

Feb. 12 of critical observation, but soon after became decidedly  
[cont] uncooperative.

The only other large-billed loon, the Common, has an all dark culmen, lacks the auricular patch, when the bill is pale it is grayish not yellow, etc.

Remsen,  
J.V.  
1978

Red-throated Loon

Gavia stellata

Apr. 25 Cuyamaca Lake, San Diego Co., Calif.: 1 - very unusual  
locality. Small loon with pale back and crown, eye in white of  
face, small bill upturned.

Remsen,  
J.V.  
1978

Horned Grebe  
Podiceps auritus

June 2 Pt. Reyes, Marin Co., Calif: 1 in full breeding plumage with  
Surf Scoters at Fish Docks. Very late or summering

Remsen,  
J.V.  
1978

Black-footed Albatross

Diomedea nigripes

March 31 Pigeon Point, San Mateo Co., Calif.: 6 seen behind  
freighters (3 + 1 w/o albatrosses) going north along coast

July 12 Boat trip to Farallon Islands, San Francisco Co., Calif.: 1 flew  
past our sailboat ~ 4 mi. E of Farallons.

Remsen,  
J.V.  
1978

Pink-footed Shearwater  
Puffinus creatopus

Jan. 14 Monterey Bay boat trip, Monterey Co., Calif.: 3 - extremely unusual in winter, but there have been several reports recently on Christmas Counts. Flying with Manx for direct comparison.

March 31 Pigeon Point, San Mateo Co., Calif.: 1 → S

Remsen,  
J.V.  
1978

Manx Shearwater  
Puffinus puffinus

Jan. 5 Monterey area, Monterey Co. Calif.: 2 - moving west past Pt. Pinos - small shearwater with rapid wingbeat, very dark above, pale below.

Jan. 14 Monterey Bay boat trip, Monterey Co. Calif.: 6 - amazing for winter in Monterey Bay, but numbers were extraordinary last 2 months of '76.

March 31 Pigeon Point, San Mateo Co., Calif.: 1 → S, fairly close to shore; rapid wingbeat, small size

Remsen,  
J.V.  
1978

Ashy Storm-Petrel  
Oceanadroma homochroa

July 12 San Francisco Bay, Alameda Co., Calif.: 1 seen < 20 ft.  
From boat about 1 mile outside Berkeley marinas.  
Flushed off the water, whence it flew off in the direction  
of the abandoned pier. Clearly a medium-sized  
all dark petrel - all dark rump and forked tail -  
gestalt of Ashy, not Leach's. Amazing record  
inside S.F. Bay.

Remsen,  
J.V.  
1978

Black Storm-Petrel

Oceanodroma melania

Apr. 29 Pt. Loma, San Diego Co., Calif. : 100 < 1 mi from shore -  
unusual so close to land.

Remsen,  
J.V.  
1978

Reddish Egret  
Egretta rufescens

Apr. 25 San Diego area, San Diego Co., Calif.: 1 at mouth of  
San Diego river - present here since Oct. 1977.

# Roseate Spoonbill

Ajaia ajaja

Jan. 14 Castroville, Monterey Co., Calif.: 1 imm/sub.-ad. in flooded artichoke fields between Molera Rd. and Castroville where it has been for 2 weeks. Obvious spoon-tipped broad bill, wings mostly pink with hint of dark tip; head seemed mostly white.

Remsen,  
J.V.  
1978

Black Brant  
Branta bernicla nigricans

Apr. 27 North End Salton Sea, Riverside Co., Calif : 3 - rare but  
regular at Salton Sea in spring.

Apr. 29 North End Salton Sea : 6

Remsen,  
J.V.  
1978

Emperor Goose  
Branta canadica

Jan. 1 Point Reyes, Marin Co., Calif.: 3 in ad. plumage at E. end of Limantour Estero. Watched for 20 minutes through telescopes from edge of parking area. Head and neck white; throat solid black, breaking up into black and gray barring on neck; bill pinkish, short, very triangular; underparts black and gray barred; upperparts similar but greater distance between black bars; legs bright orange-yellow; tail white.

Remsen,  
J.V.  
1978

Snow Goose  
Chen caerulescens

Apr. 27 North End Salton Sea, Riverside Co., Calif.: 11 - extremely late. All birds apparently can fly.

Apr. 29 North End Salton Sea: 10 (1 of the birds on 27 Apr. was almost certainly a Ross).

Remsen,  
J.V.  
1978

Ross' Goose  
Chen rossi

Apr. 29 North End Salton Sea, Riverside Co., Calif.: 1 with 10 Snow Geese  
at mouth of Whitewater River - late, and few records for  
Riverside Co.

Remsen,  
J.V.

1978

Tufted Duck  
Aythya fuligula

Jan. 2 Lake Merritt, Alameda Co., Calif.: 1 ♂ at eastern end of lake where it has been for 2+ months. Tuft is much less prominent now than when I saw the bird in late October

Jan. 3 Lake Merritt: 1 ♂ (same bird)

Feb. 8 Point Reyes, Marin Co., Calif.: 1 imm. ♂ in freshwater pond next to road just S. of parking lot. In addition to a very small tuft, the entire bill tip was black and the back was a very uniform blackish-brown, probably darker than most scaup. [this combination eliminating scaup]. The head was more or less scaup-shaped [eliminating Ring-necked Duck]. The bird was thought to be an imm. ♂ due to the presence of some patches of white feathers along flanks.

^  
Sides varying shades of brown — some areas looked nearly pure white, especially towards rear.

The bird was studied for 15 minutes with a scope, but high winds made precise accuracy of details hard to note. The bird looked about the same size as a nearby Lesser Scaup, although this bird's bill looked proportionately larger. This is almost certainly the same bird found here early in January by Rich Stallcup and at that time showed no traces of male plumage.

Remsen,  
J.V.  
1978

Greater Scaup  
Aythya marila

Apr. 25 San Diego area, San Diego Co., Calif.: 3♂ + 1♀ on San Diego bay just N. of e. end of Coronado Bridge, where they were discovered weeks ago. large bill nail, rounded heads.

Apr. 29 San Diego area: 4 (same birds)

Remsen,  
J.V.

1978

White-rumped Sandpiper  
Calidris fuscicollis

June 3 Monterey area, Monterey Co., Calif.: 1 at the mouth of the Carmel River where found yesterday evening by Jeri Langham. We arrived at dawn and watched the bird feeding on the small mudflat for an hour and a half through scopes from 50 to 200 ft. In overall size and shape, the bird seemed identical to a Baird's Sandpiper: a large peep with noticeably long wings and a seemingly long body. This bird also seemed very fat when viewed head-on - almost turtle-like in shape:

head-on view to  
show "squat" profile

The above sketches were traced from sketches made while watching the bird through the scope. The bill, legs, and iris were blackish. A dark loreal area and dark, striped crown set

Remsen,  
J.V.

White-rumped Sandpiper  
Calidris fuscicollis

Monterey area [cont]

June 3

[cont]

off a white eyebrow. The face was a pale grayish with the palest area in the lower cheek area. The breast was strongly striped <sup>brownish gray</sup>, like a Pectoral Sandpiper except that the background color between the stripes was white, not buff. The breast stripes ended abruptly and the remainder of the underparts were white, except for disintegrating stripes and spots along the sides to the upper flanks. The back was striped dark brown with some buffiness between stripes. The wings were brownish with many of the coverts dark-centered and pale-edged; the folded primaries appeared a solid dark brownish. In flight, the rump/uppertail coverts area was white and the tail was dark. That the rump was completely white was clearly seen twice in flight and also once when preening the rump area.

The white rump eliminates any other small shorebird except 3 species which have longer legs and bills and are larger in body size (plus many other major and minor differences): Curlew Sandpiper, Wilson's Phalarope, Stilt Sandpiper. The only species remotely similar in shape, Curlew Sandpiper, lacks conspicuous breast streaks and has a decurved bill. The call note of the Curlew Sandpiper is not unlike other Calidris whereas the distinctive call of the White-rumped is unique among shorebirds — I'm familiar with both. The Carmel bird gave a call totally unlike that given by any shorebird I've ever heard — a very high-pitched squeal similar to call note of Costa's Hummingbird.

Ruff  
Philomachus eugnax

Jan. 5 Monterey area, Monterey Co. Calif.: 1 ♂ in rocky intertidal  
~ 1/2 mile S of Pt. Pinos off Sunset Dr. — a  
large, chunky shorebird with very long, bright orange legs.  
Oval white patches on sides of base of tail very  
conspicuous in flight; bill dark, size and shape of  
Greater Yellowlegs more or less; upperparts grayish-brown  
with each feather on the back thinly margined with pale  
buffy; front part of face whitish; indistinct eye-line;  
underparts grayish-white. Present here for 1+ week —  
found on Monterey CBC by Parmeters.

## Black-headed Gull

Larus ridibundus

Feb. 25 Arcata, Humboldt Co., Calif. : 1 ad. at Mad River Slough bridge in the Arcata Bottoms. This bird has been present for a week, but had been identified previously as a Franklin's Gull. Mike and John Parmeter found the bird last weekend and although they had identified it as a Franklin's at the time, they realized that evening that it was not a Franklin's after consulting literature. However several other people subsequently looked at the bird and had concluded it was a Franklin's.

When we arrived at the spot, Jon Dunn took one look at the bird sitting on the mud several hundred yards away in miserable, glare-plagued light and instantly called it a Black-headed Gull. Lacking Jon's recent extensive experience with this species in Europe (and Jon's field I.D. skills), I couldn't say it was a Black-headed for sure, but offered to swim across Mad River Slough if the bird was a Franklin's (or any other N. American gull). It was sitting on the mud with 3 Ring-billed Gulls and 3 Mew Gulls. It seemed to be smaller than a Ring-billed but larger than a Mew. The mantle color was virtually identical to that of the Ring-billed Gulls (pale gray), and definitely darker than the Mew Gulls; and so it could not be a Franklin's Gull, which has a very dark gray mantle, and should appear smaller than Mew.

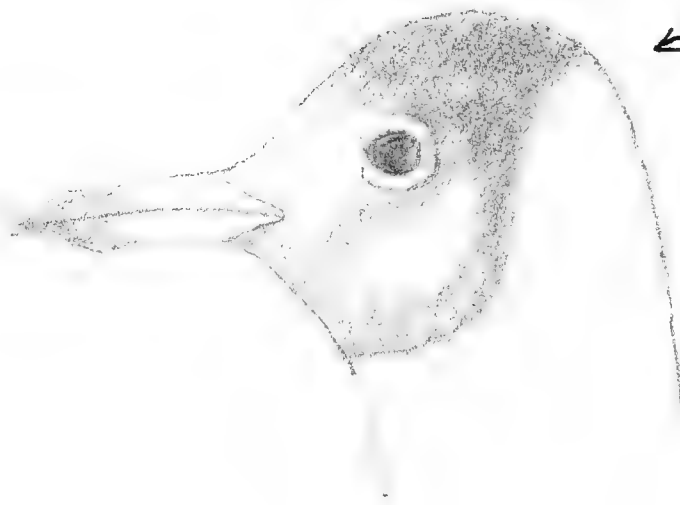

While Jon went to find the other carloads of birders in the area, I stayed and studied the bird in much better light and at a closer distance (~200 yds) through the scope as it was swimming on the water. The shape of the bird

1978

Black-headed Gull  
Larus ridibundus

Arcata [cont]

Feb. 25 was not right for Franklin's - the head was too  
[cont] small and pointed and the wings too long;  
the neck was too long and skinny - the whole  
bird just looked too long and tapering for Franklin's -  
which to me looks short-necked, round-headed, and  
stocky:

← the dark of the head  
arches upward sharply on  
the nape.

The head was mostly blackish gray, especially on  
the crown where it was darkest; the forehead and an  
area below the eye were still whitish - breeding plumage  
not yet complete. There was a white eye-ring, but I  
couldn't tell if it was complete. The bill was  
dark-tipped ~~but~~, basally dark orange-brown to reddish-  
brown depending on the light.

When everyone arrived, the bird was flushed and  
we were able to see the wing pattern from above and  
below. It was difficult to ascertain the exact  
pattern in the primaries in flight and so what follows  
should not be interpreted as 100% accurate - we never  
had what I consider a truly satisfactory study of  
the primary pattern. The wing pattern description also

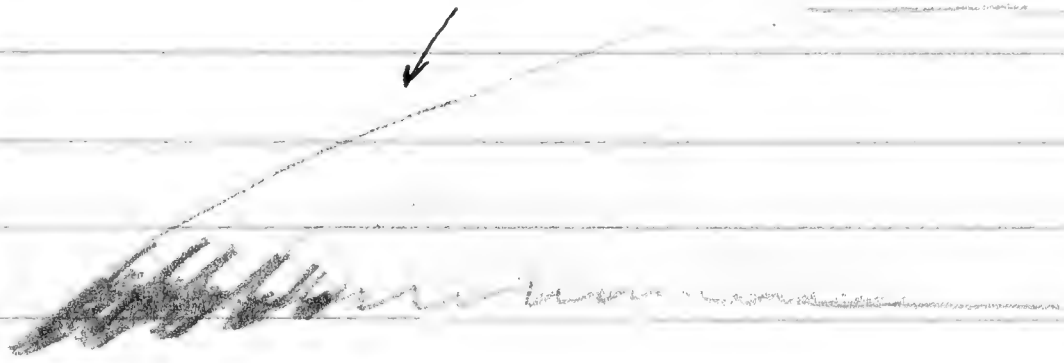

Remsen,  
J.V.  
1978

Black-headed Gull  
Larus ridibundus

Feb. 25 includes details seen when we returned late in the  
[cont] afternoon and watched the bird flying around the slough  
for 20 minutes, but never closer than 200 yds.

Upper wing

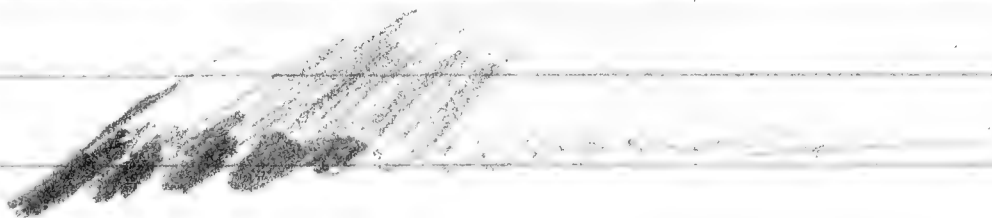

leading edge of wing white. This edge in the primaries  
was not as conspicuous as on Bonaparte's Gull or  
↓ field guide pictures  
of Black-headed

at least 5 outermost  
primaries were black-tipped

Underwing:

← wing-linings whitish;  
rest of underwings  
dusky grayish.  
This contrast was  
not always apparent—  
only in good light

at least 5 outermost primaries  
were black-tipped; These primaries were also darker basally, darker than  
the rest of the dusky underwing

Also, when the bird was sitting on the water, the underside  
of the outermost primary could be seen when the bird was  
facing away from me, and it seemed to have a black  
border characteristic of ridibundus:

1978

## Little Gull

Larus minutus

Feb. 25 Arcata, Humboldt Co., Calif.: 1 ad. was seen at the north edge of Eureka at the wood-scrap "sculpture" area along the shore of Humboldt Bay. It was watched as it fed at a distance out over Humboldt Bay for  $\frac{1}{2}$  hour and was studied as it perched on the shoreline for 3-4 minutes. It was almost always seen with 4 Bonaparte's Gulls, providing good comparisons. While resting with Bonaparte's, it slightly smaller and shorter-legged and the nape was duskier. In flight, the blackish underwings were conspicuous, even as far as  $\frac{1}{2}$  mile away feeding out over Humboldt Bay. The underwings looked all blackish except for a narrow white border and a white tip. The upperwings were uniform gray with white tip. The wings appeared shorter and blunter in flight than Bonaparte's Gull. It foraged by flying 15-30 feet above the water, flying in a straight line, and suddenly wheeling and banking downward to the water surface, where it would alight momentarily and then resume cruising.

The small size and black underwings eliminate all other gulls in the world

Remsen,

Snowy Owl  
Nyctea scandiaca

Feb. 25 Arcata, Humboldt Co., Calif.: 1 ♂ was studied for 20 minutes perched near the top of a spindly, tall conifer in a clump of trees in Manila bordering the coastal sand-dunes. An enormous white owl with brown barring over the entire lower breast and belly, and blackish-brown rows of markings over the entire wing surface and back. There were also a few dark flecks on the head above the eyes on the crown. The iris was yellow. The feet and toes were feathered white - no claws visible. The bird was sitting in the sun and fluttered its gular area at regular intervals; the wings were also slightly drooped and held outward from the body; the ventral feathers seemed slightly compressed - the bird seemed to be having a hard time in the torrid, windless 60° weather.

A brief study of skins at MUZ indicated our bird could have been an imm. ♂, ad. ♀, or perhaps imm. ♀. Fall imm. ♀s are more heavily barred - barring is broader and extends into breast.

Remsen,  
J.V.  
1978

Northern Saw-whet Owl

Aegolius acadicus

- March 11 Coyote Hills Reg. Park, Alameda Co., Calif. : 1 sitting in small, dense ornamental tree on lawn at visitor center where it was found earlier this morning. It was approached to within a foot, as it slept on a small horizontal branch at the lower edge of the tree about 7 ft off the ground. It was perched about 2 feet in from the outer shell of the foliage. The tree had fairly dense foliage. This is almost certainly a migrant at this locality, which has only small patches of low trees and a few tall planted pines.
- March 29 Coyote Hills : 2 birds in separate trees - same area.
- Apr. 29 Mt. Palomar St. Park, San Diego Co., Calif. : 1 at entrance to Fry Creek Campground ; responded vigorously to imitations - it dove at me 3 times, coming within inches of my face - but we could never get a light on the perched bird.

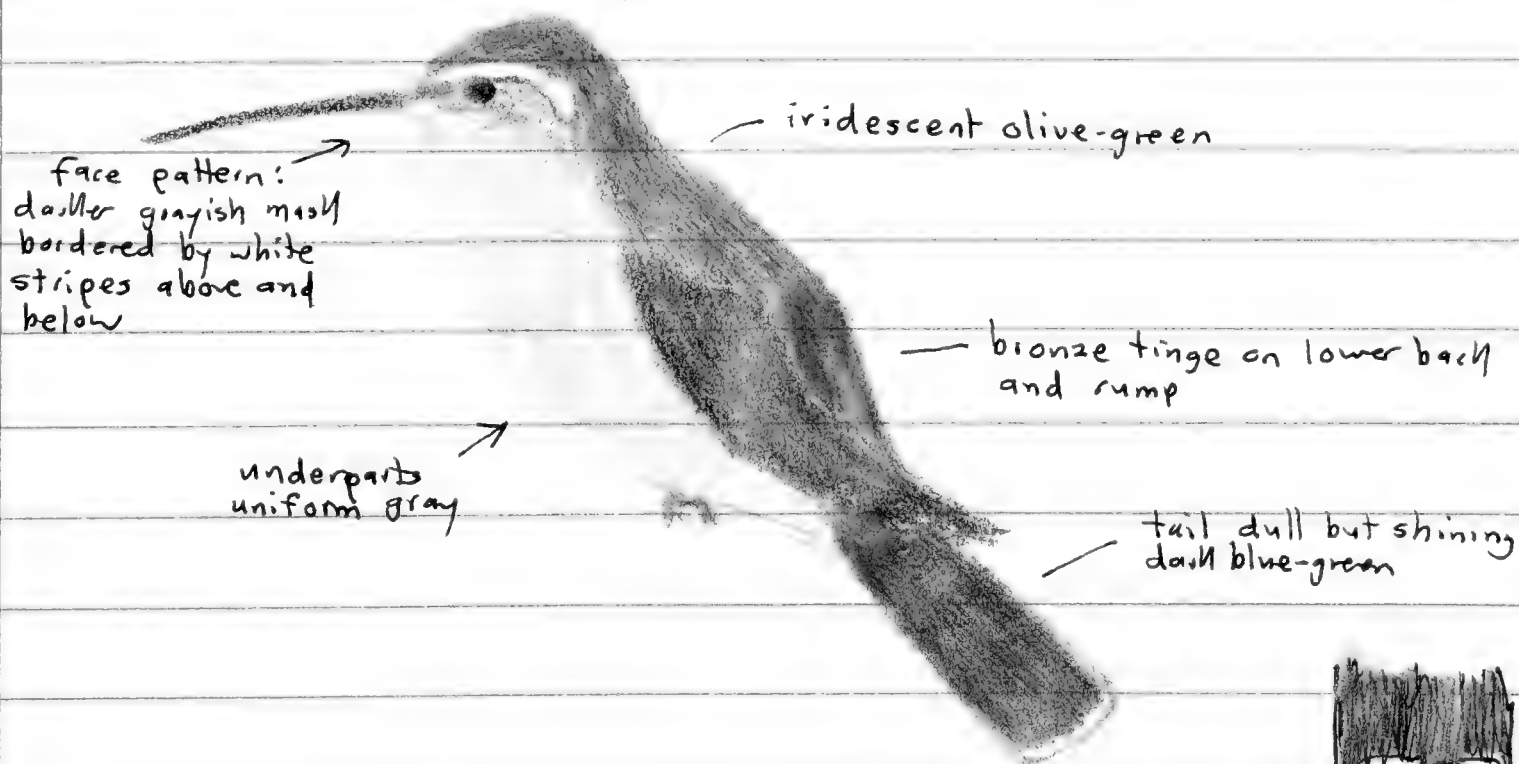

Remsen,

1978

Blue-throated Hummingbird

Lampornis clemenciae

Jan. 19 Three Rivers, Tulare Co. Calif.: 1 ♀ at a feeder on Heidi Rd where it has been present since Christmas. We saw the bird as soon as we arrived and saw it 20+ times in the hour we were there. Description: upper-parts shining green, becoming bronzy on lower back and rump; wings blackish; face dull grayish with very well-defined white superciliary arching downwards posterior to the eye and another white streak below the eye from near the bill to below the eye - this lower streak was not as broad and in between the two stripes, the face was a dusky, dull grayish conspicuous; the underparts seemed a very uniform gray; vent area white, surrounded by greenish gray; upperside of tail shining dark blue-green, hue changing according to angle of light; the outer tail feathers were conspicuously tipped white; when perched, all of the tail feathers visible from the upperside were narrowly tipped white; the underside

of the tail was mostly white with a dark base → The bill was blackish. The overall size was much, much larger than any hummer normally occurring in California;

Remsen,  
J.V.  
1978

## Blue-throated Hummingbird

Lampornis clemenciae

### Three Rivers [cont]

Jan. 19

[cont]

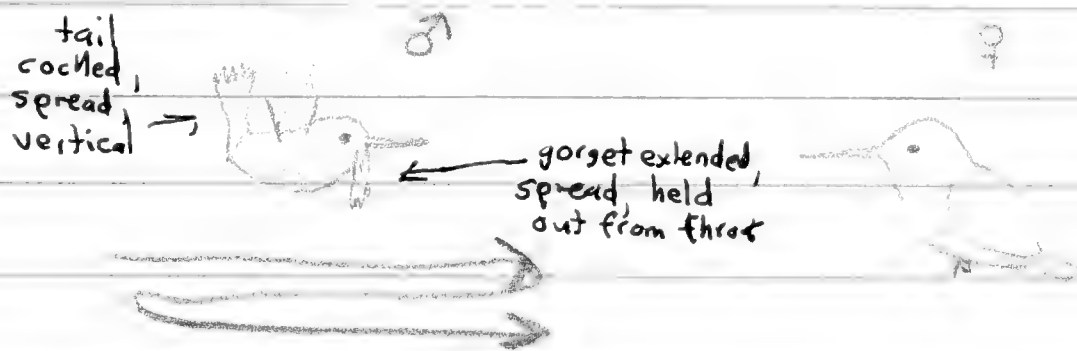

it seemed to be nearly twice the length of a nearby Anna's Hummingbird and at least as long as a nearby Oregon Junco. In flight the tail seemed proportionally longer than that of other hummers in Calif. The rapid opening and closing of the tail feathers highlighted the white tail tips on the outer tail feathers. The call note, heard about every 10 minutes, was a series of very high-pitched "peeek!" 's, a whistle with a slight upward inflection, usually 2-4 given in a series with intervals of about 1 second. Also given was a lower-pitched "phew!" whistle when chasing other birds from the feeder. It chased all other birds from the hummingbird feeder, including a sapsucker and a Nuttall's Woodpecker. The ♀ Rivoli's Hummingbird is the only other species with which the Blue-throated could be confused; Rivoli's has a green tail (less extensively spotted), lacks the pair of white facial stripes, and is not an even gray underneath.

Remsen,  
J.V.  
1978

Allen's Hummingbird  
Selasphorus sasin

Mar. 18 Pt. Reyes, Marin Co., Calif.: A male was watched displaying directly to a female in some open undergrowth adjacent to the stream next to the Pt. Reyes hqts. area. The male had given one complete pendulum display and then flew to within a foot of a female (which we had not seen) carrying some white fluff. The female retreated a foot or so and the male began darting back and forth at her with tail cockled and spread and gorget extended:

The hovering ♂ zigzagged back and forth in front of the female, moving directly at her and then back, then at her again, etc., all in rapid succession. Presumably the female's view would look something like this:

The male is maximizing the area of rufous exposed to the female — the tail spread display reminiscent of Sage Grouse.

Perhaps the moving back and forth in front of the female maximizes the flashing effect of the iridescent gorget.

1978

Blue Jay  
Cyanocitta cristata

Feb. 25 Arcata, Humboldt Co., Calif.: 1 was seen in the Fieldbrook area near Arcata where it has been present for weeks. We watched it for 10 minutes sitting in a tree and coming once to a backyard feeder. We saw it from as close as 50 feet in good sunlight. It was obviously a Jay, seemingly smaller than Steller's. It was crested, but much less obviously than Steller's. The crown was blue, as was the nape, back, wings, and tail; the deepest blue was in the primaries and the dingiest was on the back; the face was white with a black post-ocular line; a conspicuous black collar separated the head from the body; the underparts were a dingy whitish. The wings had conspicuous white areas (details of placement not noted) and the outer tail feathers were white as were the tips of the rest of the tail feathers. Both the wings and tail were conspicuously banded black. The bird was silent the entire time we were there, although it had given typical Blue Jay calls just prior to our arrival according to P. Lehman.

Remsen,  
J.V.  
1978

Mountain Chickadee

Parus gambeli

June 2 Point Reyes, Marin Co., Calif. : 1 at the Fish Docks where A had been since at least yesterday. This would be an extremely good record for Marin Co., at any time of year, but early June is particularly bizarre in that this should be the middle of the breeding season for Mtn Chickadee, not a period of movement. There was a Winter Wren at the same spot — also a rather northern spp. out of place at this time of year (presumably the Marin Co. breeding population is sedentary).

The bird was recognized by its husky, hoarse, "che-de-day" before it was seen. The underparts were all whitish with the throat backish; the back and wings were gray; the crown was black as was a black ~~post~~ eyeline setting off a white eyebrow. On three occasions the bird flew out away from the trees heading west, but each time returned to the trees after successively longer flights, the last at least  $\frac{1}{4}$  mile.

Mountain Bluebird  
Sialia currucoides

Cameron Parish, Louisiana

Oct. 28 1 near Holly Beach - probably an imm. ♂. Similar in size and shape to Western Bluebird but ~~slk~~ sleeker, slimmer, longer wings + ~~long~~ shorter tail. Plumage description: wings and tail striking sky blue; crown blue but paler than wings and tail; nape and upper back grayish; face blueish contrasting with grayish throat and breast; flanks and undertail coverts very white, striking at a distance; uppertail coverts and rump very blue contrasting strongly with pale grayish flanks and undertail coverts. We watched the bird for 15+ minutes in good light at 100 yds. through telescope as it sallied to the ground from wooden fence posts bordering a power-station. It occasionally hovered briefly over the ground before dipping to the ground. Unlike any plumage of either Eastern or Western Bluebird, there was absolutely no trace of any rusty or brown tones. The hue of blue was paler, more towards turquoise than either Eastern or Western.

1978

White-eyed Vireo  
Vireo griseus

May 19 Point Reyes, Marin Co, Calif.: I seen in the exact same row of trees at Mendoza Ranch as the bird last year in early June. It had been found yesterday by the Ghiorso's (Al + Wilma), but because Don Roberson thought their description wasn't good [iris dark, body size too large but they saw yellow spectacles, 2 white wing bars, <sup>white</sup> throat yellowish breast and flanks, white center to belly, etc.], the bird was "poo-pooed". When we found out about it this afternoon after someone else saw the bird again today and saw that the iris was white, we rushed out to try to find it. Once we located it, we saw it off and on for a half-hour or so with lengthy observations of the underparts of the bird but poor looks at the upperparts, reminiscent of last year's bird.

The most conspicuous mark on the bird was the bright, green-yellow "spectacle" - a bar extending across the forehead to the loreal area on either side. There appeared to be a thin pale-eyering but it was hard to see, especially since the iris was also pale [strikingly so in bright light on outer edge of trees, hard to see inside the dark canopy [dark pupil enlarges??]]. The rest of the face was pale grayish. The throat was grayish-white, contrasting strongly with the yellowish wash across the breast and bright yellow sides and flanks. The center of the lower breast through the belly to at least as far back as between the legs was whitish. The bill was moderately large for the body size and was definitely hooked and all blackish. We saw little of the upperparts except that there were 2 strong

Remsen,  
J.V.  
1918

White-eyed Vireo  
Vireo griseus

Pt. Reyes [cont]

May 19 white wingbars on darker wings and grayish on the back, at least at the neck region [I know the back is supposed to be greenish, but I couldn't see this on last year's bird under similar, poor observation and shape conditions]. The overall size<sub>and shape</sub> of the bird was about that of Hutton's Vireo. — small, chunky, and round-headed with large, hooked bill.

I know of no other bird in western hemisphere with a conspicuous yellow forehead, 2 white wingbars, whitish throat, yellow breast + sides + flanks, and white center of belly

Remsen,  
J.V.  
1978

Black-and-white Warbler

Mniotilta varia

June 2 Pt. Reyes, Marin Co., Calif : 2 (1 ♀ at Fish Docks + 1 <sup>singing</sup> im. ♂  
at Lighthouse and then the same bird at Nunes Ranch - the  
im. ♂ had an incomplete black throat and was not at Nunes early  
and then present later when it was no longer being seen at Lighthouse)

Remsen,

1978

Worm-eating Warbler  
Helmitheros vermivorus

July 17 Tilden Park, Contra Costa Co., Calif.: 1 seen in dense willow-dogwood thickets about 200 yds. s. of Jewel Lake opposite Nature Center where found on July 11 by Phil Gordon. Today, Linda Hale saw it at about 1030 about 20-30 yds into the thicket from the road at a spot where it had been seen most often the last three days; she came out to get me, and meanwhile Nancy Conzett, after being there for only 5 minutes, had the bird at close range in the same area at ~1045. Then we went back into the thickets and at about 1115, I heard a warbler chip note, about 20 yds. N. of the spot where Linda had seen it, which sounded like a weak or soft Yellow Warbler note, and glimpsed the bird low in the undergrowth. After 10 minutes or so, the Worm-eating Warbler came into view, and we watched it intermittently for about 20 seconds at about 30 ft. Then we lost it, but it re-appeared a few minutes later, higher in the foliage, and we saw it again for about 10 seconds in fairly bright light.

This warbler was very long-billed and short-tailed relative to other warblers. The wings and back were a dull brown without streaks or wingbars. The head was conspicuously marked - <sup>a</sup> blackish streak <sup>each</sup> through <sup>one</sup> eye and <sup>either</sup> along side of crown - thus the center of the crown had a broad, pale streak bordered on either side by a well-defined blackish streak. The underparts appeared to be a pale buffy, looking almost dull golden yellow when in the sunny foliage.

Remsen,  
J.V.  
1978

Northern Parula  
Parula americana

May 19 Point Reyes, Marin Co., Calif. : 1 ♂. (full breeding plumage)  
at Mendoza Ranch. - blueish upperparts (couldn't see  
back due to poor viewing conditions), 2 white wingbars,  
broken white eye-ring, yellow lower mandible, yellow throat  
bordered by blue + reddish chest band, white belly, small  
size, short tail.

Remsen,

Remsen,  
J.V.  
1978

Common Grackle  
Quiscalus quiscula

Dec 2 Wet Mountain Valley, Custer Co., Colo: 1 in the town of Westcliffe. Rare in mountains at any time of year. - unheard of in winter. Good study, close range. Identified as a grackle by call before seen. Size and tail shape seemed to indicate ♀. Larger than Red-winged Blackbird; glossy purple-blue head contrasting with bronzy-olive-blackish body; heavy, curved billed; iris dark

Remsen,  
J.V.  
1978

Great-tailed Grackle  
Cassidix mexicanus

June 18 Palace of Fine Arts, San Francisco, San Francisco Co., Calif.: 1 ♂  
on the island in the north end of the lagoon and  
adjacent "mainland" shoreline where it had been found  
earlier in the day for the first record for northern California.  
The bird spent most of the time hidden from view in the  
foliage of the trees on the island, occasionally giving loud  
whistled notes which sounded similar to those <sup>I'd heard</sup> given by this  
species at Imperial Dam, Furnace Creek Ranch, Ramon Lake etc. —  
an explosive, rising whistle, sometimes followed by a similar,  
higher-pitched whistle. Twice I heard it give a burst of 4  
quick, inflected, rising whistles. I have never heard Common  
Grackle give these calls, and I grew up with the bird in  
Colorado.

We watched the bird perched in the open at about  
100 feet for 5-10 minutes. Most of the upperparts ~~were~~ <sup>and</sup>  
underparts were an iridescent blackish with blue tones  
around the head; the wingcoverts were dark brown and looked  
<sup>The primaries looked dull blackish.</sup>  
worn. The iris was gleaming white. The tail was long  
and vaulted in flight. The bill was long, blackish,  
slightly decurved, and hooked; it seemed longer and thinner  
proportionally than Common Grackle. The body size was 2-3 x  
as long as a Brewer's Blackbird, much too large for Common  
Grackle. This bird lacked the bronzy-greenish and violet  
iridescence which is conspicuous on Common Grackle. Boat-tailed  
Grackle has a dark iris and would be highly unlikely to even  
occur in California.

Remsen,  
J.V.  
1978

Yellow-headed Blackbird  
Xanthocephalus xanthocephalus

Jan. 5 Moss Landing, Monterey Co., Calif. : 1 ad. ♂ in fields next
